

Occupational Hygiene

People at work can be exposed to a variety of hazards through their normal workplace activities. Hazards may include:-

- Chemicals in the forms of liquids, dusts, solvents, fumes and fibres
- Physical hazards such as noise, vibration and non-ionising radiation (UV light, lasers)
- Ergonomic problems such as manual handling, work tool use and workstation use.

Not effectively controlling these hazards can have a harmful effect on human health. The consequences may not appear until some time after the initial exposure. It is important to understand how best to protect and safeguard the health of your employees, your most valuable asset.

Why choose Envex?

- Over 20 years practical experience in occupational hygiene, health, safety and risk
- Envex experience covers all areas of the workplace and industry
- We are a flexible, client focussed company who will provide you with practical solutions from experience
- Complete service from monitoring, to problem identification, to bespoke solutions for your organisation.

Services

We provide comprehensive, high quality occupational hygiene surveys to assess and control workforce exposure to hazardous chemicals and physical agents including noise, vibration and indoor air quality. Customers throughout the UK, Ireland and Europe receive the highest level of service and independent expertise from our highly trained, experienced and qualified occupational hygienists.

Monitoring projects utilise the latest specialist equipment using Health and Safety Executive approved methods. Extensive analysis is carried out at our UKAS accredited partner laboratories. Our full range of services includes:

- Workplace air monitoring for dusts, vapours, fumes and gases
- Noise monitoring, assessment and control
- Hand - arm and whole body vibration monitoring and control
- Indoor air quality assessment and building health management surveys (e.g., building related sickness, lighting, asbestos management, air conditioning and ventilation)
- Local exhaust ventilation examination and testing
- COSHH assessments
- Asbestos services, covering identification, evaluation and costing, monitoring, site surveys, project and contractor management
- Legionella risk assessments, legionella audits and water sampling
- Site observations and practical advice on improvements to working practices
- Training and toolbox talks – at your location on-site or at our training centre

We can also offer a range of occupational health services such as pre-employment screening, health surveillance, Management of work-related ill health and Ill-health absence assessments.

Our customers come from a wide range of industrial sectors, including manufacturing and service companies, construction, public sectors, charities and commercial organisations.
